# OLADIPO AYANLEKAN AYOMIDE

## Web and Python developer

I am an experienced Python and Web Developer, with web scraping, web automation, data processing, and full-stack development as the main lines of specialization. I have extensive experience with Beautiful Soup, Selenium, and Pandas and other frameworks aimed at gathering and processing information from the internet in order to increase business value while obtaining accurate insights. Skilled in building and maintaining highly available and enterprise-level solutions to improve data flow and minimize processing time.

As much at ease with front-end web technologies as with back-end development, I have practical working knowledge of such technologies as HTML, CSS, JavaScript, React and Next.js, and Express. I have a strong inclination to put into practice both development and data skills to make a difference, grow the business, and work on interesting projects where I can improve and gain more technical skills.

## Experience

### 2023- 2024

Toltem | Penial Plaza, Akure Ondo State, Nigeria

### Frontend Intern

At Toltem International Limited, where I interned, I had the opportunity to work hand-in-hand with senior developers in the development of an aesthetic and user-friendly website. This was beneficial in that it enabled me to put into use some of the technical skills I had acquired in the course of study all while learning web development ethics. I assisted in building features of the company's website including making it responsive and improving user experience. This practical exposure not only increased my knowledge of web technologies but also developed my skills in working with a team where quality results are paramount.

### 2023 - Till Date

Deeplordconsults | Akure Ondo State, Nigeria.

### Python Developer

Built a web scraper with the intention of monitoring and comparing prices for various kinds of products across different e-commerce websites. Extracted information on products using Beautiful Soup and Selenium, storing it in a PostgreSQL database, while developing a notification system that would send users an e-mail if the price dropped. Designed a web crawler application to source real estate listings data from multiple websites. Cleaned and manipulated data on Panda, provided visual reports on market trends, price changes, and characteristics of properties that would help in decision making by investors.

### 2024 - Till Date

NewKind Agency | Lagos Nigeria

### Web developer

At Newkind Agency, where I worked as a Full Stack Developer, I was responsible for the redesign of the agency's website. The project included a careful examination of the current website, its advantages and disadvantages and the development of new web solutions to increase the usability of the service

I made sure to focus on the portal's operational speed to reduce the loading time and ensure easier transitions. Moreover, I participated in the development of additional functions with other teams to enhance the working of the site across different devices and ultimately, better user experience. In this particular mission, I have further strengthened my front and back-end development abilities, thus allowing me to add immense value to the agency's web presence.
